• Definition

A function f from a set X to a set Y is a relation* between elements of X, called **inputs**, and elements of Y, called **outputs**, with the property that each input is related to one and only one output. The notation $f\colon X\to Y$ means that f is a function from X to Y. X is called the **domain** of f, and Y is called the **co-domain** of f.

Given an input element x in X, there is a unique output element y in Y that is related to x by f. We say that "f sends x to y" and write $x \xrightarrow{f} y$ or $f: x \to y$. The unique element y to which f sends x is denoted

f(x) and is called f of x, or the output of f for the input x, or the value of f at x, or the image of x under f.

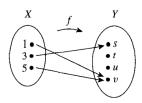

The set of all values of f taken together is called the $range\ of\ f$ or the $image\ of\ X\ under\ f$. Symbolically,

range of $f = \text{image of } X \text{ under } f = \{y \in Y \mid y = f(x), \text{ for some } x \text{ in } X\}.$

Given an element y in Y, there may exist elements in X with y as their image. If f(x) = y, then x is called a **preimage of y** or an **inverse image of y**. The set of all inverse images of y is called *the inverse image of y*. Symbolically,

inverse image of $y = \{x \in X \mid f(x) = y\}.$

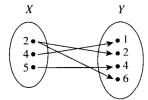

1. Let $X = \{1, 3, 5\}$ and $Y = \{s, t, u, v\}$. Define $f: X \to Y$ by the following arrow diagram.

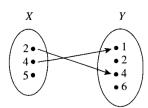

- a. Write the domain of f and the co-domain of f.
- b. Find f(1), f(3), and f(5).
- c. What is the range of f?
- d. Is 3 an inverse image of s? Is 1 an inverse image of u?
- e. What is the inverse image of s? of u? of v?
- f. Represent f as a set of ordered pairs.

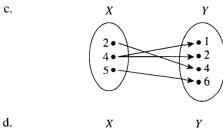

3. Let $X = \{2, 4, 5\}$ and $Y = \{1, 2, 4, 6\}$. Which of the following arrow diagrams determine functions from X to Y?

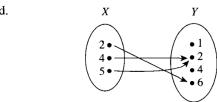

a.

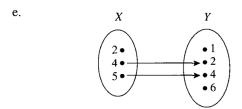

b.

Definition

Let F be a function from a set X to a set Y. F is **one-to-one** (or **injective**) if, and only if, for all elements x_1 and x_2 in X,

if
$$F(x_1) = F(x_2)$$
, then $x_1 = x_2$.

Or, equivalently,

if
$$x_1 \neq x_2$$
, then $F(x_1) \neq F(x_2)$.

Symbolically,

 $F: X \to Y$ is one-to-one $\Leftrightarrow \forall x_1, x_2 \in X$, if $F(x_1) = F(x_2)$ then $x_1 = x_2$.

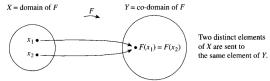

Figure 7.2.1(b) A Function That Is Not One-to-One Collapses Points Together

Definition

Let F be a function from a set X to a set Y. F is **onto** (or **surjective**) if, and only if, given any element y in Y, it is possible to find an element x in X with the property that y = F(x).

Symbolically:

 $F: X \to Y \text{ is onto} \quad \Leftrightarrow \quad \forall y \in Y, \exists x \in X \text{ such that } F(x) = y.$

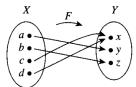

Figure 7.2.5 An Arrow Diagram for a One-to-One Correspondence

Definition

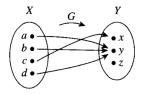

A **one-to-one correspondence** (or **bijection**) from a set X to a set Y is a function $F\colon X\to Y$ that is both one-to-one and onto.

7. Let $X = \{a, b, c, d\}$ and $Y = \{x, y, z\}$. Define functions F and G by the arrow diagrams below.

Domain of F Co-domain of F

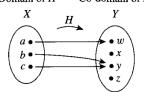

Domain of G Co-domain of G

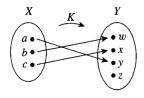

- **a.** Is F one-to-one? Why or why not? Is it onto? Why or why not?
- b. Is G one-to-one? Why or why not? Is it onto? Why or why not?

8. Let $X = \{a, b, c\}$ and $Y = \{w, x, y, z\}$. Define functions H and K by the arrow diagrams below.

Domain of H Co-domain of H

Domain of K Co-domain of K

- a. Is *H* one-to-one? Why or why not? Is it onto? Why or why not?
- b. Is *K* one-to-one? Why or why not? Is it onto? Why or why not?

In each of 16–19 a function f is defined on a set of real numbers. Determine whether or not f is one-to-one and justify your answer.

16.
$$f(x) = \frac{x+1}{x}$$
, for all real numbers $x \neq 0$

17.
$$f(x) = \frac{x}{x^2 + 1}$$
, for all real numbers x

18.
$$f(x) = \frac{3x-1}{x}$$
, for all real numbers $x \neq 0$

19.
$$f(x) = \frac{x+1}{x-1}$$
, for all real numbers $x \neq 1$

Означення

Дві множини A,B (не обов'язково скінченні) називають рівнопотужними, якщо існує бієкція з однієї в іншу

- Скінченні множини
- Натуральні числа і парні натуральні числа
- Натуральні числа і цілі числа
- Інтервал (0, 1) і інтервал $(1, +\inf)$
- Відрізок [0, 1] і відрізок [1, + inf)
